

Student Diversity Goals And Enrollment Report, 2004

In 2000, the Board of Regents requested and approved five year diversity goals for student participation in each system institution. UNR's goal was to increase the diversity of its student body by increasing the total number of "regular" (degree seeking) underrepresented students from a base number of **1,878** in Fall 2000, to **2,300** in Fall 2005 (an increase of 22.5%). This five year goal called for an annual increase of **84** students, not disaggregated by ethnic group.

The five year goal was met in Fall 2002, three years ahead of schedule. For Fall 2004, the total number of underrepresented students increased by 91 students (108.3% of our annual goal) to 2,452. This represents a recovery from the uncharacteristically small increase registered in Fall 2003.

To put this change into perspective it is useful to note that by Fall 2004 the total population of "regular students" increased by 2.8% from the previous Fall. Participation by underrepresented students, a segment of that larger population, increased by 3.9% over the same period.

This pattern has been consistent since the base year (2000). It is reveal, perhaps more clearly, by the rates of increase in student participation by ethnicity from 2000 to 2004. The total population of "regular students" has increased by 22% from the base year while the population of under-represented students has increased by 30.6 percent. As a result, the proportion of students of color within the "regular" student population has moved from 14.8 to 15.9%.
